

ABSTRACT OF THE DISCLOSURE

5 A recyclable, one-time use, print on demand, digital camera comprises a chassis. The chassis carries an image sensor device for sensing an image, a processor for processing the sensed image, a pagewidth print head for printing the sensed image, an ink supply arrangement for supplying ink to the print head and a supply of print media onto which the sensed image is printed. A casing surrounds and encases the chassis so that the ink supply arrangement is unable to be accessed without destruction of the casing.
